SYNTHETIC TEST DOCUMENT. NOT A REAL JOURNAL ARTICLE.

Synthetic Fulltext Study

DOI: 10.1234/epistarium.test.full

The research problem is how AI-generated content influences trust.

The purpose of this study is to describe communication practices.

The theoretical framework involves social communication theory.

The research question asks how users respond to synthetic news.

The study used a qualitative case study research design.

Data collection used semi-structured interviews with participants.

Purposive sampling recruited twenty participants for this project.

The questionnaire instrument was checked before collection.

Thematic analysis and coding procedure were used in this study.

Results suggest variation in how participants interpret sources.

Limitations include a convenience sample and limited generalizability.

Future research should compare multiple national settings.
